The 5 Numbers Every Online Trainer Needs To Know

Channel: Brandon Carter · Published: Oct 28, 2026 · Watch: https://www.youtube.com/shorts/rJYmwfbl_uc Source: full transcript

📋 Executive Summary

Brandon Carter outlines five interconnected metrics that online fitness trainers must know to build a predictable $10K/month business — and shows how missing even one will cause the entire system to break down.

📑 Contents

- 💵 Number 1: Cash Collected Per Sale
- 📉 Number 2: Close Rate
- 🗓️ Number 3: Average Show Rate
- 💬 Number 4: Conversation-to-Booking Rate
- 📬 Number 5: Inbound Messages Per Post
- 🔢 The Full Reverse-Engineering Example

💵 Number 1: Cash Collected Per Sale 0:00

- The first metric is how much cash you actually collect, on average, each time you close a sale
  - Example used: **$500 average per closed deal**
  - To earn $10,000/month at $500/sale, you need **20 sales per month**, or roughly **5 sales per week**
- This is the anchor number — every other metric is derived from it

📉 Number 2: Close Rate 0:09

- Your close rate is the percentage of people you speak with on a sales call who actually buy
  - Example used: **50% close rate**
  - At 50%, you need **10 sales calls per week** to produce 5 closed deals
- Carter stresses that this number alone is meaningless without knowing the next metric

🗓️ Number 3: Average Show Rate 0:21

- Show rate is the percentage of booked calls where the prospect actually shows up
  - Example used: **70% show rate**
  - To get 10 people to show up, you must book **14 calls** (10 ÷ 0.70 ≈ 14)

- Described as potentially the make-or-break number for the entire business — if ignored, all other planning falls apart

💬 Number 4: Conversation-to-Booking Rate 0:44

- This is the percentage of DM/message conversations that result in a booked sales call
  - Example used: **1 in 5 conversations** leads to a booking (20% conversion)
  - To book 14 calls, you need **70 conversations per week**
  - That works out to **10 conversations per day** (70 ÷ 7 days)
- This translates the abstract goal into a concrete daily messaging activity target

📬 Number 5: Inbound Messages Per Post 0:57

- The final metric is how many inbound DMs or messages each piece of content generates
  - Example used: **5 inbound messages per post**
  - To hit 10 conversations/day at 5 messages/post, you need to **post twice per day**
- This converts the entire revenue goal into a simple content publishing schedule

🔢 The Full Reverse-Engineering Example 1:06

- Once all five numbers are known, the math chains together cleanly from revenue goal down to daily actions:

Metric	Example Value	Resulting Requirement
Goal	$10,000/month	—
Cash per sale	$500	20 sales/month = 5 sales/week
Close rate	50%	10 sales calls/week
Show rate	70%	14 booked calls/week
Conv-to-booking rate	20% (1 in 5)	70 conversations/week = 10/day
Messages per post	5	2 posts/day

> "Once you understand these calculations, growing your online fitness business becomes easy."

- Carter notes he has helped **thousands** build successful fitness businesses and personally crossed **his first $1 million** as an online trainer using this framework
- The core takeaway: turn a revenue goal into a set of daily, trackable actions — post twice, start 10 conversations — and the business becomes predictable
