

Best And Worst Foods For Cutting

Channel: Brandon Carter · Published: Jul 10, 2026 · Watch: <https://www.youtube.com/shorts/5o6re0MddWs> Source: full transcript

Executive Summary

Brandon Carter gives five practical supermarket swaps for cutting — replacing calorie-dense favorites like ribeye, chicken thighs, and avocado with leaner alternatives that fit more easily into a caloric deficit.

Contents

-  Swap 1: Chicken Tenders → Rotisserie Chicken
-  Swap 2: Ribeye Steak → Sirloin Steak
-  Swap 3: Bacon → Turkey Bacon
-  Swap 4: Chicken Thighs → Chicken Breast
-  Swap 5: Avocado → Leafy Greens

Swap 1: Chicken Tenders → Rotisserie Chicken [0:00](#)

- Chicken tenders are the food to avoid when cutting
- Recommended alternative: grab a **rotisserie chicken** from the meat aisle
 - Already cooked — no prep needed, removing a common barrier to eating lean
- Bonus tip: skip the skin to cut calories even further

Swap 2: Ribeye Steak → Sirloin Steak [0:22](#)

- Ribeye is delicious but carries significantly more calories — too many for a cut
- **Sirloin steak** is found right next to ribeye in the store
 - Much leaner and lower in calories
 - Still lets you have steak for dinner without blowing your deficit

Swap 3: Bacon → Turkey Bacon [0:22](#)

- Regular bacon is flagged as a food to avoid while cutting
- **Turkey bacon** is the swap
 - Acknowledged as not tasting as good as regular bacon
 - Significantly fewer calories, making it easier to fit into a cut

Swap 4: Chicken Thighs → Chicken Breast [0:44](#)

- Chicken thighs are described as "the most delicious part of the chicken" but are notably higher in calories than breast
- **Chicken breast** is the recommended swap despite Brandon personally disliking them
 - Quote: "I hate chicken breasts with my whole heart. I think they're gross."
 - His takeaway: if you're cutting, you eat them anyway — preference takes a back seat to the goal

Swap 5: Avocado → Leafy Greens [0:44](#)

- Avocados are called out as both delicious and nutritious — but calorically dense
 - That caloric density makes them harder to include during a cut
- Swap to **leafy greens / salad greens**
 - Allow you to eat a high volume of food and feel full
 - Very low calorie density, so they don't eat into your deficit the way avocado does
