You are comfortable in your routine

Channel: Tim Luong · Published: Oct 12, 2026 · Watch: https://www.youtube.com/shorts/Rf3VYdsql50 Source: full transcript

📋 Executive Summary

Routines only maintain your existing baseline. Real growth comes from intense, time-limited sprints (60–90 days) that permanently elevate your baseline, which your routine then preserves.

🔄 Routines Are Maintenance, Not Growth 0:00

- Once you have a routine, you are only preserving the baseline comfort level you already built
  - A routine does not push you forward — it holds you where you are
- To actually level up, you must **break your routine** and push through a new, higher layer of discomfort

> "الروتين هو مجرد صيانة" — "Routine is just maintenance."

🥊 The Boxing Camp Analogy 0:00

- Imagine someone entering a boxing boot camp
  - They train intensely for **60–90 days**
  - Afterwards, they return to their regular routine
- The key outcome: their new routine baseline is now **significantly higher** than before the camp
  - The brutal sprint permanently elevated what "normal" looks like for them

💼 Applying the Sprint Model to Business 0:21

- You cannot operate at maximum intensity every single week in business — it is unsustainable
- But you *can* go all-out for a focused **90-day sprint**
- The recommended cycle:
  - Sprint at full capacity for ~90 days
  - Then pull back, rest, and recover your energy

    - Maintain the new, elevated baseline through your updated routine
- The result mirrors the boxing analogy: each sprint permanently raises the floor of what your routine sustains
