

The Most Profitable AI Hack For Ecommerce Brands

Channel: Arie Scherson · Published: Jul 30, 2026 · Watch: <https://www.youtube.com/watch?v=qfnCF2g-OXM> Source: full transcript

Executive Summary

Arie Scherson shows how any ecommerce brand can set up AI-generated email retention flows in minutes using Claude and Omnisend's MCP connector, reducing customer acquisition pressure and generating strong back-end revenue.

- 📧 Combining Proven Formats with Internal Research
- 🚀 Final Recommendations and Takeaways

🎯 The Core Problem: Why Retention Beats Lower Ad Costs 0:00

- Every ecommerce store — Shopify, Amazon, dropshipping, established brands — is chasing lower customer acquisition costs
 - The common refrain is "how do I get better Meta ads results?"
- Arie's reframe: **you don't need better Meta ads results if you nail retention**
 - Better back-end monetization means the front-end cost matters less
- He runs a meta ads media buying agency and has his own ecommerce brand
 - Previously built drop-shipping brands focused entirely on front-end profitability
 - Has since shifted focus toward back-end retention systems
- The promise: one automation can generate nearly **\$1,000 in a few days**
- Goal: install email flows so that "no matter what happens in the front end with Meta, you're still going to be printing money"

🔧 Setting Up Claude + Omnisend MCP Integration 1:31

- The tool stack: **Claude** (or ChatGPT) + **Omnisend** via MCP (Model Context Protocol)

- Omnisend described as "the best bang for your buck" and "the most powerful tool at the best price"
- Step-by-step setup process:
 - Step 1 — Click "Connect Claude" inside Omnisend
 - Step 2 — Copy the MCP URL: `mcp.omnisense.com/mcp`
 - Step 3 — Go to Claude and open **Customize** settings
 - Step 4 — Click **Connectors**, then **Add Custom Connector**
 - Step 5 — Name it "omnisend" and paste the URL as the Remote MCP endpoint
 - Step 6 — Click **Add** — that's it
- Once connected, you can instruct Claude directly to create:
 - Abandoned checkout flows
 - Abandoned cart flows
 - Product abandonment flows
 - Retention flows
 - Customer win-back flows (targeting customers who already received products and may be happy with them)

Building a High-Converting AI Knowledge Hub in Claude 2:40

- Arie creates a **Claude Project** for each specific ecommerce brand
 - Projects act as a persistent knowledge hub for the brand
- Inside the project, he uploads multiple **context documents** accumulated over time
 - He blurs these in the video to protect proprietary information
- With Omnisend connected to the project, Claude can use all that brand context to write "super high-converting flows"
- Warning: without context, Claude will produce "AI slop" — it might still beat nothing, but quality suffers significantly
 - Feeding the AI proper brand context makes a major qualitative difference

Omnisend Pricing, Migration, and ROI Data 3:02

- If you're on a more expensive email platform, Omnisend will **migrate everything over in 5 days** and handle it for you
 - Migration saves **35%** on email costs
 - Described as potentially "life-changing" for brands already running on thin margins
- Omnisend is **free up to ~500 emails**
- After that, still "extremely affordable" relative to ROI
- Omnisend's own data: **\$79 earned for every \$1 spent** on their platform
- Sponsorship disclosure: Arie is an Omnisend partner

- Discount code **RE30** gives **30% off for the first 3 months**

Using Milled to Find Proven Email Inspiration 3:28

- **Milled** (milled.com) is described as "the largest search engine for ecommerce emails"
 - Free account available
 - Lets you browse the most popular emails from virtually any brand
- Example: Arie uses **Rhoad** (skincare brand) as a reference
 - He's a big fan and an investor in **ELF** (Rhoad's parent company, which owns 100% of Rhoad)
 - Calls it "the most culturally relevant skincare brand on earth"
- Workflow:
 - Find emails you like on Milled
 - Copy or take inspiration from the designs/formats
 - **Save them into your Claude project** so Claude can replicate or riff on them

Email Marketing as an Agency Business Opportunity 4:16

- For complete beginners: ecommerce brands do require some upfront capital — that's acknowledged
- However, **email marketing as a service** is flagged as one of the best agency businesses to start right now
 - Reason: AI (Claude + MCP) lets a single person handle approximately **10 clients simultaneously**
 - Near-zero startup cost — just a Claude subscription
- Counterintuitive admission: even though Arie is teaching this, "a lot of you are still not going to do this"
 - Many store owners will still end up hiring an agency even when AI makes it easy
 - This is the market opportunity for aspiring agency owners
- Arie's own agency focuses exclusively on Meta ads and doesn't currently offer email marketing
 - Acknowledges he probably should, now that AI makes it easier
 - Decides against it to avoid diluting his team's focus

Combining Proven Formats with Internal Research 4:59

- The **best practice** is not to just use AI-generated templates blindly
 - Combine popular, proven email designs (sourced from Milled) with deep internal brand research
- Three research layers Arie feeds into his Claude projects:
 - **Market research** — understanding the broader category
 - **Competitor research** — what others in the niche are doing
 - **Internal research** — data and insights from your own brand
- Each research area should be turned into a **document** and uploaded to the Claude project
 - This ensures emails written by Claude are authentic and high-converting, not generic

- Arie applies the same principle to ads:
 - Finds viral, proven ad formats
 - Applies his own internal research, copywriting, and direct response principles on top
 - Result: fast, effective creative production

The core insight: AI is only as good as the context you give it. Proprietary brand research fed into Claude is what separates genuinely great email copy from AI slop.

Final Recommendations and Takeaways 6:09

- If you've been procrastinating on email marketing for your store, "literally just try it out today"
- Tools needed:
 - Claude or ChatGPT (either works)
 - Omnisend (free up to ~500 emails)
 - Link provided in description
- Broader business benefit: when clients have their email/back-end dialed in, Arie's agency can be "more lenient" on Meta ad results while still scaling
 - Strong retention infrastructure de-risks the entire paid acquisition strategy
- Call to action: follow the channel for more workflows like this
