I Let AI Do My To-Do List

Channel: Brandon Carter · Published: Nov 05, 2026 · Watch: https://www.youtube.com/shorts/bqIb4BPLsQ0 Source: full transcript

📋 Executive Summary

Brandon Carter demonstrates a mindset shift: instead of using AI to answer questions, hand your actual to-do list tasks to AI agents and let them execute the work for you.

📑 Contents

- 🤖 The Core Idea: Let AI Execute Your To-Do List
- 📱 Example 1: Following Up with Instagram Leads
- 📊 Example 2: Making Work Presentations
- 🎬 Example 3: AI Editing and Posting the Video

🤖 The Core Idea: Let AI Execute Your To-Do List 0:00

- The prompt Brandon recommends: ask your AI agent "what are things on my to-do list tomorrow that you can do for me?"
  - The key distinction is *doing*, not just answering — he explicitly states "I have AI do for me. I'm not just asking it questions. It's doing for me."
- AI agents mentioned as tools for this approach:
  - **Muse** (paid tier) — cited as the specific agent used for Instagram-related tasks
  - Claude
  - ChatGPT

📱 Example 1: Following Up with Instagram Leads 0:00

- Use case: following up with leads on Instagram who ghosted, didn't respond, or didn't close
- With Muse on the paid tier, you can tell it this task and it will:
  - Go into Instagram
  - Find the relevant leads
  - Perform the follow-up outreach for you
- "It can legit do that for you" — Brandon's emphasis that this is real execution, not just drafting a message

📊 Example 2: Making Work Presentations 0:22

- If making a presentation is on your to-do list, any capable AI agent can build it for you

- No specific tool singled out here — framed as broadly applicable across agents

🎬 Example 3: AI Editing and Posting the Video 0:22

- Brandon is using this very video as a live experiment in AI task execution
  - He plans to give the raw video to both **Claude** and **ChatGPT**
  - Whichever edits it best is the one that gets posted
  - The AI that wins will also handle posting — not Brandon himself
- Illustrates the end-to-end delegation concept: ideation → execution → publishing, all by AI
