Movement: Walk 20,000 Steps Per Day 0:00

- Walk **20,000 steps per day**
 - This is roughly double the commonly cited 10,000-step goal, significantly increasing daily caloric expenditure through non-exercise activity thermogenesis (NEAT)

Nutrition: Protein & Calorie Targets 0:00

- Consume **at least 1 gram of protein per pound of bodyweight** daily
 - Supports muscle retention and growth, especially important when in a calorie deficit
- Calculate your calorie ceiling using a simple formula:
 - Take your bodyweight in pounds
 - Multiply by 10
 - Do not eat more calories than that number
 - Example: a 180 lb person would cap calories at 1,800 per day

Training: Full Body Workout Protocol 0:00

- Do **full body workouts 3–4 times per week**
- Structure each session as follows:
 - Pick **2 exercises per body part**
 - Perform **3–4 sets of each exercise**
 - Rest only **60–90 seconds between sets**
 - Short rest periods increase workout density and metabolic stress

Hydration: Two Gallons of Water Daily 0:22

- Drink **2 gallons of water per day**
 - Well above standard recommendations; supports metabolism, appetite control, and performance

Work Ethic: 12 Hours a Day, Every Day 0:22

- **Work 12 hours a day, including weekends and holidays**
 - Frames elite productivity as a non-negotiable daily standard, not a weekday-only effort

Mindset: Daily Goal Review & Visualization 0:22

- Review your goals and visualize them **twice daily**:
 - **15 minutes every morning** — sets intention for the day
 - **15 minutes before sleep** — reinforces goals as the last conscious activity

Lifestyle Delegation: Maid & Meal Prep Services 0:22

- **Hire a maid to come twice a week** so that time is redirected to productive work instead of cleaning
- **Use a meal prep delivery company** to have all food delivered weekly
 - Eliminates time spent cooking, cleaning up after meals, and grocery shopping
 - Keeps nutrition on track without requiring willpower or planning around food prep
