I Made $100K With Meta Muse (Here's How)

Channel: Brandon Carter · Published: Nov 03, 2026 · Watch: https://www.youtube.com/watch?v=rk2WeTAaeV0 Source: full transcript

📋 Executive Summary

Brandon Carter details five practical ways he uses Meta Muse — Meta's AI personal agent — to run and grow his multi-seven-figure online fitness and coaching business, arguing it's vastly underrated compared to competitors like Grok Bot.

🤖 Introduction: Why Meta Muse Over Other Agents? 0:00

- Brandon claims to have made **over $100,000** using Meta Muse
- Works even if you have no existing business; accelerates results if you do
- Most people only use Muse for trivial tasks (booking reservations, sending flowers) — massively underutilizing it
- The common belief is that Grok Bot is the only personal agent that can make money
  - Problem: you have to trust Elon Musk
  - Overnight, users (including Brandon on the top plan) reported their Grok Bot usage was cut **in half** with no warning
  - Analogy: "Ask anybody who ordered a Roadster 10 years ago how much faith you should put in Elon Musk"
- Core lesson: **don't put all your eggs in one agent basket**
  - Each agent excels at different things
  - Meta Muse has specific advantages you can exploit for income

- Brandon uses every AI tool and agent to avoid being dependent on any single one

🎨 Customizing Your Muse 1:08

- You can fully customize your Muse's appearance, name, and voice
- Brandon's Muse: a hip-hop African-American robot named **Tyrone**, with a backwards cap, chain, and sneakers
- Tyrone speaks in Brandon's chosen voice and tone throughout the video as a live demonstration
- You can also **call your Muse** directly via a button in the app — Tyrone demonstrates a live voice call during the video from Miami

📸 Strategy 1: Deep Instagram Integration for Growth 3:49

- Meta Muse has **native deep integration with Instagram** — no external connectors needed
- This enables several high-value actions:
  - Analyze your own Instagram profile: what posts are working, what's not, what to do more or less of
  - Identify top-performing and lowest-performing content
  - Generate **10 content ideas** based on your proven winners
  - Set it on a **routine** so it delivers new content ideas every day — "never run out of content ideas"
- Exact prompt Brandon recommends:
  - "Audit my Instagram. Based on my posting, engagement, and views, give me a game plan for growth. Analyze my top-performing and lowest-performing content. Tell me what to do more and less of. Give me 10 ideas for content I should create next."
- Competitor research play:
  - Tell Muse: "Find the top five competitors in my niche. Analyze their Instagrams and top-performing posts. Give me content ideas based on what's working for them."
- Why Instagram matters: Brandon has made **millions of dollars** from Instagram and taught **over 15,000 people** to build successful online fitness businesses; Instagram is a primary lead acquisition channel
- Live demo: Muse analyzed client **Corey Armstrong** (@329K followers)
  - 134 posts pulled over last 90 days
  - **October posting spike hurt engagement**: 98 posts in October caused average engagement to drop **62%** because he flooded the feed
  - Top content: A1C diabetes client story posts with keyword triggers — pulling **2,000+ comments and 1,000+ likes**
  - Bottom content: Generic "comment LIVE for masterclass" posts — barely hitting **100 likes**
  - Key insight: "Attention follows a real person, a real result, and a specific keyword they get back"
  - Muse built a **30-day game plan**: drop to 7 posts per week, every week built off A1C-style transformation stories
  - Notable: Corey's revenue **doubled** that month despite lower engagement — engagement ≠ revenue

🏢 Agency Opportunity: Selling Instagram Growth as a Service 5:23

- If you have no business, start a **social media growth agency** (or online fitness business — Brandon's two recommended paths if starting from zero)
- The play for an agency:
  - Run the same Instagram audit for clients using Muse
  - Have Muse generate scripts in the client's voice (pulled from their Instagram)
  - Have the client record the scripts and send them back
  - Edit videos with Claude or ChatGPT — Brandon posted **1,000+ pieces of content in one month** using this method
  - Result: **24-hour turnaround** on content → more clients, faster growth
- Real-world example: Brandon's best friend **Jeremy Haynes** makes **over $1 million/month** and has no interest in doing his own content research or editing with AI — he pays others to do it
  - "That's where the arbitrage is. They still prefer to pay somebody to master it."
- AI won't replace video editors or social media managers — it gives them a **competitive advantage** if they embrace it
- Cold outreach strategy for landing agency clients:
  - **Don't** lead with insults or "I see issues with what you're doing" — Brandon blocks these immediately
  - **Do** lead with genuine compliment + value: "I see you're crushing it on Instagram. I'm a big fan. Even though you're killing it, I have strategies to take it to the next level. Here, check it out."
  - Send a **sample pack**: their Instagram analytics, top competitor analysis, what competitors do differently
  - Record a **Loom video** walking them through the document — Muse builds the document for you
  - Give them everything they're not going to do themselves — that's impressive

📥 Strategy 2: DM Management & Lead Recovery 12:56

- With nearly **1 million Instagram followers**, keeping up with DMs manually is impossible
- Muse scans Instagram inbox **multiple times per day** — both message requests and main inbox
- Flags anyone talking about coaching, fitness, or programs
- Filters out friends; surfaces only warm leads that need a reply
- Drafts replies **in Brandon's voice** using a question-first style (no price, no pitch — "Jeremy Minor style")
  - Brandon reviews the draft, tweaks if needed, and sends directly from the Muse app
  - **Never has to open Instagram** to manage this
- Muse will NOT auto-send — Brandon deliberately keeps approval in his hands
  - "I don't want it to say some dumb sh*t… I want to know what's being said"
- Sets routines for follow-up on people who:
  - Ghosted without replying
  - Didn't book a call

- Got lost in long keyword-triggered DM chats

> "I promise you there's some money in your DMs. You just got to activate them."

📄 Strategy 3: Creating Lead Magnets from Your Content 15:36

- Muse can create **professional-looking lead magnets** (PDFs, checklists, guides) based directly on your existing Instagram content
- These replace the basic "comment this word and I'll DM you" plays with polished, branded assets
- Demo: Muse previously built a lead magnet for Brandon's student **Kelly Nicole Fit**
  - A **16-page PDF** called the "Wedding Shred Checklist"
  - Written in Kelly's voice, pulled from her actual reels
  - Included a 6-month bridal countdown with day-by-day checkboxes
  - Design pulled from Kelly's feed: colors, fonts, and vibe matched her bridal-but-athletic brand
  - CTA linked directly to Kelly's coaching booking page (grabbed from her bio link)
  - Built on October 5th — took minutes
- Live demo: Brandon asked Tyrone to build a lead magnet for himself (@kingketolive, ~1 million followers)
  - Muse analyzed his feed (AI video editing for trainers, business problem-solving, book content)
  - Offered **5 topic options**:
    - AI Video Editing Starter Kit (folder setup + prompts)
    - 30-Day Content to Clients Checklist
    - Business Problem Book Map (books matched to real problems)
    - High-Ticket Trainer Starter Checklist
    - AI Coach Toolkit (tools he actually uses)
  - Brandon chose **Option 5: AI Coach Toolkit**
  - Customizations requested and executed:
    - Use real photos pulled from Instagram instead of AI-generated images
    - Link each point to a matching reel already posted
    - CTA points to live training sign-up link from bio
    - Upgraded mid-build: swap Instagram reel links for matching **YouTube video** links
  - Final output: **8-page PDF** in Brandon's voice, real photos, actual tool stack (including Code X and Claude), every point linked to a real video, CTA to live training
  - Built and rebuilt with YouTube links in real time during the video
- Use case for agencies: build lead magnets for each client, tie them to their booking links, deploy as Instagram DM funnels

📊 Strategy 4: Auditing and Building Ad Campaigns 20:08

- Connect your Facebook/Instagram ad account to Muse once — Muse never sees your password
- What Muse can do with your ad account:
  - Audit all live ads
  - Pull real spend, **cost per result**, and **ROAS**
  - Identify what's wasting budget vs. what's working
  - Write new ad copy and generate images that comply with Meta's rules
  - Build full campaigns, ad sets, and ads — set as **paused for your approval**
  - Send **daily updates** so you never have to open Ads Manager
- Approval flow: everything approved inside the Muse app — no need to log into Ads Manager
  - Only exception: billing (adding payment methods) must be done in Ads Manager directly
- Brandon's note: he personally still goes into Ads Manager because he's used to it (has spent **millions on Instagram/Facebook ads**)
  - But for beginners: "That sh*t is going to look like that scene in The Matrix" — Muse removes that barrier entirely

🏋️ Strategy 5: Client Accountability at Scale 22:21

- Muse checks client food logs, macros, and workouts from the **night before every morning around 8 AM**
- Drafts a check-in message in Brandon's voice — nothing goes to clients without his approval
- Brandon's VA handles replies; Brandon reviews compliance data and jumps in personally when needed
- Result: clients get a personalized daily message from "Brandon" without Brandon writing every message from scratch
- Setup for any type of coach (not just fitness):
  - Choose what metric matters: sales calls completed, lessons done, habits tracked, goals hit
  - Connect wherever that data lives (Notion, Google Sheets, any web tool, any fitness app)
  - Muse pulls the data each morning, drafts the check-in in your voice, you approve in the Muse app
  - No special platform required — "just wherever you're already tracking progress"
- **No voice training needed** — Muse already knows Brandon's voice from his Instagram content and reels
  - "It pulls your phrasing, your directness, that no-fluff energy"

⚔️ Meta Muse vs. Grok Bot — Key Advantages 24:40

- Grok Bot criticism:
  - Extremely **credit-hungry** — Brandon felt like just saying "Grok Bot" too many times drained credits
  - Brandon is on the **highest tier** (originally via Cursor; Elon wrapped Grok Bot pricing into Cursor after acquiring it)
  - Overnight usage cuts happened with no warning, even on top-tier plans
  - Multi-bot conversations in Grok Bot (bots talking to each other) are "a parlor trick credit-burning scam"

    - All bots share the same underlying brain — there's no real reason for them to talk to each other except to drain credits
- Muse advantages:
    - Different threads in Muse work the same as separate bots — Tyrone knows what happened in every thread without burning credits to "communicate" between them
    - Can do everything Grok Bot can do
    - **MCP (Model Context Protocol) support** was added after launch — now handles any tool without a native connector
        - If a service has an official MCP server or API, connect it through Muse's secure flow
        - Fallback options: Zapier hub or browser-based access
        - Brandon didn't realize this was added: "Zuck snuck that in on me"
    - Native Instagram integration gives it a structural edge for social-media-based businesses
- Brandon's overall philosophy: use every agent, never build your whole business on one

💳 Free vs. Paid Tier 27:46

- **Get on the paid plan** — this is Brandon's top pro tip
- Brandon's girlfriend is on the free plan; her Muse "says some dumb sh*t sometimes"
- Paid tier differences (per Tyrone):

Feature	Free Tier	Paid Tier
Model quality	Core/basic model	Stronger, newer model
Context understanding	Standard	Faster, handles larger jobs
Complex workflows	Limited	Full support (e.g., building toolkits, linking videos)
Speed	Standard	Faster execution
Daily check-ins & drafts	✅	✅
Connections	Basic	More depth, fewer limits

- Free guide available in description: shows how to start making money with Meta Muse — goes beyond what's covered in the video
- Live training event announced: 100% free, live Q&A, social media audits, AI tools giveaway for content creation, scripting hooks, and video editing — link in description
