

Can you eat late at night and still lose weight? 🌙

Channel: Brandon Carter · Published: Aug 01, 2026 · Watch: <https://www.youtube.com/shorts/X0FAXSTjGH0> Source: full transcript

Executive Summary

Eating most of your calories at night does not prevent fat loss. What matters is total daily caloric intake and macronutrients — not the time of day you eat them.

Contents

- 🌙 Meal Timing vs. Total Calories
- 🛠️ Free Tool: The RIP Road Map

🌙 Meal Timing vs. Total Calories 0:00

- The core claim: yes, you can get shredded even if you eat most of your calories at night
 - Brandon states he personally eats the majority of his calories at night, often right before bed
 - He practiced intermittent fasting for years, not eating until 3:00 p.m. — meaning all his food was consumed in the evening window
- The key principle: **meal timing is not as important as total calories and total macronutrients for the day**
 - If you are burning more calories than you consume, it does not matter what time you eat
 - Caloric deficit is the deciding factor for fat loss, not when meals occur

Free Tool: The RIP Road Map 0:21

- Brandon offers a free AI-powered tool called the **RIP Road Map**
- How to access it: comment the word "road map" below the video and he sends it directly
- What you input:
 - Height
 - Weight
 - Age
 - A photo of yourself
 - Your goals
- What the AI outputs:
 - Your estimated body fat percentage
 - How much total body fat you are currently holding

- The exact daily calories and macros needed to reach your goals
