

My Full Day of Eating (Keto Fat Loss Edition)

Channel: Brandon Carter · Published: Jun 28, 2026 · Watch: <https://www.youtube.com/watch?v=WhsZq913cD4> Source: full transcript

Executive Summary

Brandon Carter, nearly 44, details his full keto day of eating — protein shakes, eggs, berries, kale, and pre-made meal prep — hitting ~2,100 calories and 224g protein, and explains why he now tracks macros with Claude AI instead of MyFitnessPal.

Contents

-  Claude AI Macro Tracking Method
-  Meal 1: Pre-Workout Protein Shake
-  Gym Session: Super Drop Sets for Arms
-  Meal 2: Keto Breakfast (9 Eggs, Berries, Kale)
-  Mid-Day Nutrition Check-In
-  Meal 3: Keto Grilled Jalapeño Lime Chicken
-  Content Batch Filming & Cardio
-  Meal 4: Second Protein Shake
-  Meal 5: Keto Slow-Cooked Chili (Final Meal)
-  Online Fitness Business Plug

Claude AI Macro Tracking Method [0:46](#)

- Brandon uses **Claude ("Claw")** to track calories and macros — describes it as superior to MyFitnessPal, which he used for over a decade
- How the tracking works:
 - He has a custom prompt loaded into a Claude chat that "knows" his daily calorie and protein targets
 - To log a food: take a photo of the nutrition label (or a plate/menu), upload it to the Claude chat
 - Claude estimates or reads the macros and calories and logs them
 - It also connects to **Apple Health** to pull calories burned so far that day
 - It then calculates and displays his **real-time calorie deficit** (calories burned minus calories consumed)
 - It maintains a **running daily total** of calories, protein, net carbs, and fat
- Interactive/conversational features:
 - You can ask it questions like "What combination of chicken thighs and legs do I need to hit my goals?"
 - You can photograph a restaurant menu and ask "What should I order to hit my caloric goals for today?"
 - It provides multiple mathematical options; you pick one and log it

- He gave an example: uploaded a photo of a Caesar salad (no croutons) and it estimated the macros automatically
- Why he prefers it over MyFitnessPal:
 - Conversational — can ask follow-up questions and get personalized meal suggestions
 - Integrates calorie burn data from Apple Health for a true deficit view
 - Photo-based logging is faster and more flexible than searching a database
- Works with both Claude and ChatGPT
- To get his exact prompt: DM him the word **"tracking"** on Instagram at **@KingKeto**
 - He notes the prompt is too long to post in the video description

Meal 1: Pre-Workout Protein Shake 0:22

- First thing consumed for the day, before going to the gym
- Brandon buys **pre-made protein shakes exclusively** — he is "wholeheartedly against" mixing/shaking protein himself
- Logged via photo of the label into Claude; this starts his running daily total

Gym Session: Super Drop Sets for Arms 2:45

- Workout style: **super drop sets** — supersets composed entirely of drop sets
- Exercise pairing:
 - **Bicep cable curls** (with rope attachment) → immediately into **tricep cable pushdowns** — no rest between exercises
- Drop set protocol:
 - Start at a weight you can only do ~6 reps with perfect form
 - Drop 2–3 plates, do ~6 more reps with perfect form
 - Drop again and do reps to failure
 - Immediately switch to the tricep movement and repeat the drop set sequence
 - Rest between drops: no more than 1–2 seconds — "if it's more than two seconds, it's not a drop set, you're basically just doing extra sets"
- Bicep curl technique cues:
 - Use the rope attachment on cables
 - **Twist the wrist** at the top of the curl — the bicep is responsible for wrist supination, so twisting activates it more
 - Keep elbows stationary — no swinging, no lifting the arms
 - Only the elbow joint moves
- Tricep pushdown technique cues:
 - Get a full contraction at the bottom; hold briefly

- Control the weight on the way up (eccentric)
- Lean back slightly for better range of motion
- Twist at the top
- He does **3 super drop sets** total and describes this as essentially his entire arm routine
- Pre-workout used: **Brand Woke by Bucked Up** — notes they don't pay him but he's friends with the CEO

Meal 2: Keto Breakfast (9 Eggs, Berries, Kale) 6:27

- Prepared by his girlfriend; eaten after the gym
- Exact components:
 - **9 eggs**
 - **1 oz of kale** (weighed on a scale)
 - **150 ml of berries**
 - Thousand island dressing
- Brandon emphasizes that berries and green vegetables are keto-compatible — calls out common misconceptions
- Fiber callout: "Only 12% of Americans get enough fiber per day" — he claims to get more fiber than most people despite being strictly keto for **11 years straight**
- Logged into Claude: received macros per meal plus updated running daily total showing calories, protein, net carbs, and fats
- After this meal: **calorie deficit of 524** (calories burned vs. consumed so far that day)

Mid-Day Nutrition Check-In 9:20

- Brandon checks in on his numbers after training clients and before his next meal
- Running total at this point used to inform what to eat next
- Illustrates how Claude's real-time deficit tracking guides food choices throughout the day

Meal 3: Keto Grilled Jalapeño Lime Chicken 9:37

- Source: **pre-made meal prep** — walked to a local nutrition store to pick it up
- Item: **Keto Friendly Grilled Jalapeño Lime Chicken**
- Logged via photo of the label into Claude
- Running totals after this meal:

Metric	Value
Calories consumed	~1,400
Protein	134 g
Net carbs	27 g

Metric	Value
Fat	84 g

Content Batch Filming & Cardio 10:25

- After meal 3, went out to batch-film social media content
- Filmed **18+ videos** in one session wearing various swim trunks and shirts
- Used a dedicated camera woman
- Later, went live simultaneously on **Instagram and TikTok** using two phones — while doing cardio on his **exercise bike** at the same time
- Demonstrates how he stacks productivity: content creation + client engagement + cardio simultaneously

Meal 4: Second Protein Shake 11:14

- Had a protein shake after finishing meetings and Instagram/TikTok live sessions
- Logged via photo of the label into Claude
- Running totals after this shake:
 - **1,500 calories** consumed
 - **160 g of protein**
- Plans after this: film a YouTube video, then go to the gym again for a second workout session

Meal 5: Keto Slow-Cooked Chili (Final Meal) 11:57

- Another **pre-made meal prep item**: Keto Slow-Cooked Chili — noted as having "real good macros"
- This is his **last meal of the day**
- Logged via photo of the label into Claude
- End-of-day totals:

Metric	Value
Total calories consumed	~2,100
Total protein	224 g
Net carbohydrates	38 g
Total calories burned	~2,800+
Calorie deficit	724

"This is why I think that the Claude shit is the best" — real-time deficit math from Apple Health integration makes it far more actionable than a simple food diary.

- He reinforces the use-case of asking Claude at end of day: "What should I eat right now to hit my calorie goals?" or photographing a restaurant menu for a recommendation

Online Fitness Business Plug 8:00

- Brandon runs a live weekly training for clients on growing an online fitness business using AI
- Shared student income results from the call:
 - One client: **\$1,500 in the first 2 days of June**
 - Another client (Adam): **\$14,500 for the month of May**; prior months: ~\$89K in March, crossed **\$110,000 in one month** (31 days)
- Announced a **live training on Sunday at 2 p.m.** covering how to grow an online fitness business with AI
 - Link to sign up in the video description
- His Instagram handle: **@KingKeto**
