

# 60% cheaper. 2x more sales.

Channel: Tim Luong · Published: Jun 27, 2026 · Watch: <https://www.youtube.com/shorts/n--hVWCxzgA> Source: full transcript

## Executive Summary

A personal brand compounds sales efficiency: paying 60% less per booked call while closing at twice the rate doesn't produce a 2x gain — it produces a 4–5x improvement in overall sales efficiency per closed deal.

## Contents

-  The Compounding Math of Personal Brands

## The Compounding Math of Personal Brands 0:00

- The core claim: a personal brand produces two simultaneous improvements in sales performance
  - **60% reduction** in cost to book a call
  - **2x higher close rate** once on the call
- These two gains are multiplicative, not additive
  - Most people would assume combining them yields a ~2x improvement
  - In reality, the combined effect is closer to a **4–5x improvement** in sales efficiency per closed deal
- The key insight is the "compounding effect" — the reason most people underestimate personal brands
  - Cheaper acquisition × higher conversion = exponentially better economics, not linearly better

The biggest miss: people evaluate personal brand ROI in isolation (either cheaper leads OR better closes) rather than recognizing the multiplicative compounding when both improve together.
