

I Found A \$220B Ecom Niche Hidden In Plain Sight...

Channel: Arie Scherson · Published: May 26, 2026 · Watch: <https://www.youtube.com/watch?v=v1PwONd3XaM> Source: full transcript

Executive Summary

The \$220B shorts market has a red-hot sub-trend — jorts (jean shorts) — peaking in June. Arie walks through real stores, ad research tactics, winning offer structures, and free tools to launch or scale a Shopify store around it immediately.

-  Winning Offers, AOV, and Store Setup
-  Free Tools & How to Launch
-  Key Signals Framework & Final Takeaways

The \$220B Shorts Market & the Jorts Trend 0:22

- The overall **shorts market is worth \$220 billion** per year — a figure Arie describes as "ridiculous"
 - Encompasses many sub-categories: sports shorts, sleeping shorts, casual shorts, and more
 - Most creators and e-com entrepreneurs are not talking about this market
- The specific trend highlighted is **jorts** — jean shorts
 - Jorts were popular decades ago and are now making a major resurgence
 - Search volume and demand data show they **peak in June**, giving a roughly one-month window to capitalize
 - Described as "absolutely popping off" with strong seasonal momentum
- Who this is for:
 - Entrepreneurs who want to launch a new Shopify store around a trending product
 - Existing fashion store owners looking to add momentum with a timely trend
 - TikTok sellers who like to "surf scale" on viral trends

Real Store Examples & Traffic Estimates 1:57

- **Alfrek Eden** (first store highlighted)

- Started as a dropshipping store, now operates with 3PL (third-party logistics) setups in the US and multiple other countries
- Also has a TikTok Shop
- Traffic: **1.7 million monthly visitors**, predominantly US but worldwide
- Strategy: always jumping on the latest trends — currently combining the jorts trend with the **rhinestone trend** (glitter/embellishment details on clothing)
- Product pages are simple but feature very high-quality product images
 - Arie notes these images are easy to replicate using AI tools: ChatGPT, Nano Banana, or any large language model platform
- **Trono** (second store)
 - Also selling jorts, targeting US and UK markets
 - Lower traffic than Alfreak Eden
 - Arie estimates roughly **six figures per month** in revenue based on traffic signals
- **Bare Bottom** (third store — described as the most impressive find)
 - Found via the Meta Ad Library searching for "jorts", sorted by highest impressions
 - Traffic: approximately **450,000 monthly visitors**
 - Arie estimates **\$2 million+ per month** in revenue
 - Has a cause-marketing angle: "one item purchased = one meal donated"
 - Very simple store setup — strong review section
 - Running **890 different ads** in their library (sorted by highest impressions)
 - Arie calls them out: "Bare Bottom, shoutout to you guys. I'd love to connect."
- Traffic-to-revenue estimation method Arie uses:
 - Based on his own demo store experience: scaled from **\$0 to \$4,000/day within 90 days**, with ~1,500 visitors on that peak day
 - Uses that visitor-to-revenue ratio as a benchmark to estimate other stores' revenues
 - Acknowledges this is not perfectly accurate without backend access

Ad Research Process: Meta Ad Library Deep Dive [4:37](#)

- The **Meta Ad Library** is a free tool anyone can use to research competitors' ads
- Arie's research process, step by step:
 - Search for your niche keyword (e.g., "jorts") in the Meta Ad Library
 - **Sort by highest impressions** — ads with the most impressions have spent the most money, making them the most likely winners
 - Identify ad formats and copy that appear repeatedly — these are proven
 - Click on a brand name → go to "Page Transparency" → "Ad Library" to see ALL ads a specific brand runs
- Notable winning ad format discovered: the **"notes" format**

- Looks like a text reminder/note graphic
- Example copy found: "Reminder — jorts are back. Durable. Comfortable."
- Arie notes the benefit statements could be stronger but the format is still performing well
- Jorts in this ad are priced at **\$50** — not a cheap market
- Key insight on impression sorting:

"Sorted by highest impression, the ones that have the highest impression are the ones that have spent the most money, meaning they're more likely than not the ones that are doing the best for them, otherwise they wouldn't be spending so much money on them."

- Ad replication tip: copy-paste winning ad creative into ChatGPT and adapt it to your own product

Winning Offers, AOV, and Store Setup 8:27

- **Four-pack bundle offer** identified as a strong winning structure for jorts and similar apparel
 - Bundles multiple variants (e.g., different colors/washes) into one purchase
 - Drives high AOV — the example found was priced at **\$162**
 - Arie calls this "a high AOV, really high AOV actually"
 - Works well for any product with multiple variants
- Store design observation: the top-performing stores have **very simple setups**
 - Bare Bottom's store looks nearly identical to a basic Shopify theme
 - Core elements: product images, reviews, a cause/mission statement — that's it
- Returns caveat:
 - Apparel inherently has a returns risk
 - Arie's mitigation insight: **men are less likely to return products than women**
 - Targeting men's jorts is therefore a smart play — lower return rates AND men are more under-served in fashion e-com

Free Tools & How to Launch 6:30

- **Free Store Builder** (from Shopify Lab)
 - Completely free, no catch
 - Uses the same theme as Arie's demo store, which converted at **6%**
 - Link in video description
- **TeamDrop** — sourcing platform
 - Free to use
 - Find any product, connect with a sourcing agent for free
 - Supports both dropshipping (ship existing products) and custom product builds
 - Currently highlighted hot product: shirts (in addition to jorts)

- **Shopify Lab Community**
 - Arie's paid community for e-com entrepreneurs (beginners and experienced)
 - Includes courses and access to demo store builds
 - Demo store example: scaled from \$0 to \$4,000/day in 90 days
- **Akemi** — Arie's e-com growth agency
 - Works with brands up to nine figures
 - Runs Meta ads and TikTok ads at significant scale
 - Builds stores internally as well
- Investment interest: Arie mentions he actively invests in consumer product brands and is open to connecting with founders or VC firms

✓ Key Signals Framework & Final Takeaways [7:41](#)

- Arie's three-signal framework for validating a trend before launching:
 - **Signal 1 — Search volume trend:** Is the keyword growing and peaking? Jorts peak in June — confirmed
 - **Signal 2 — Total addressable market (TAM):** Is the broader market massive? \$220B shorts market — confirmed
 - **Signal 3 — Ad spend signals:** Are competitors spending heavily on ads? Sort Meta Ad Library by highest impressions to confirm — confirmed for jorts
- "Up into the right" philosophy: Arie specifically looks for products and brands whose metrics are trending upward — traffic, impressions, and sales all climbing
- How Arie started: built a Shopify store as a side hustle while working a 9-to-5, then compounded those skills into an agency, a community, and investing in brands
- Encouragement to just launch: "I want to get everybody out there launching their own Shopify stores... building a Shopify store on the side is super fun. That's how I started."
- Jorts-specific timing reminder: peak demand is **June** — the window to launch and scale is right now
