

WALK 20,000 STEPS A DAY TO GET RIPPED

Channel: Brandon Carter · Published: Aug 13, 2026 · Watch: <https://www.youtube.com/shorts/83dKj77Rnek> Source: description only

Executive Summary

Walking 20,000 steps daily burns 800–1,000 extra calories. Brandon Carter breaks it into four simple scheduled walks that fit into a normal workday routine without much extra effort.

🔥 Why 20,000 Steps?

- Walking 20,000 steps a day burns **800 to 1,000 extra calories**
 - This is a significant daily caloric deficit contribution without intense exercise
- The claim is that it is "easier than you think" when broken into structured segments throughout the day

The 4-Walk Daily Schedule

- The 20,000 steps are split across four distinct walking sessions:

Time	Duration	Steps Gained
 Morning (wake up)	30 minutes	3,000 steps
 After lunch	30 minutes	3,000 steps
 After work	60 minutes	6,000 steps
 Every hour at work (10 min/hour)	~80 min total	8,000 steps
Total		20,000 steps

- Morning walk: 30 minutes right after waking up = 3,000 steps
- Post-lunch walk: 30 minutes after eating = 3,000 steps
- Post-work walk: 60 minutes after the workday ends = 6,000 steps
- Hourly work breaks: a 10-minute walk every hour during the workday = 8,000 steps
 - Tip: **set an alarm** each hour as a reminder to get up and walk
- Following this schedule means you hit 20,000 steps by bedtime
