

How to Make \$20K a Month as an Online Trainer

Channel: Brandon Carter · Published: Aug 13, 2026 · Watch: <https://www.youtube.com/shorts/XgXqUsLdd6w> Source: full transcript

Executive Summary

Brandon Carter presents a step-by-step reverse-engineering formula that converts a \$20K/month revenue goal into a precise daily number of DMs to send, using fixed close-rate and outreach-to-booking benchmarks.

Contents

-  The Reverse-Engineering Formula
-  Working the Math to a Daily Action

The Reverse-Engineering Formula 0:00

- Brandon Carter's credibility framing:
 - Claims to have made his **first million as an online trainer**
 - Says he has taught over **15,000 people** how to build successful online fitness businesses
- The core idea: stop guessing — instead, divide your income goal backwards into a single daily action
- The formula uses three fixed conversion benchmarks:
 - **30% close rate** on sales calls
 - **5% outreach-to-book-call ratio** on DMs
 - A 30-day month divided into weeks and days

Working the Math to a Daily Action 0:22

- The step-by-step process (using \$20K/month as the example goal):
 - **Step 1 — Monthly sales needed:** Divide your monthly income goal by your program price
 - Example: $\$20,000 \div \text{program price} = \text{number of clients to close per month}$
 - **Step 2 — Monthly calls needed:** Divide monthly sales needed by 0.30 (30% close rate)
 - If you need 4 sales and close 30% of calls, you need ~13–14 calls/month
 - **Step 3 — Weekly calls needed:** Divide monthly calls by 4
 - **Step 4 — Daily calls needed:** Divide weekly calls by 7
 - **Step 5 — Daily DMs needed:** Divide daily calls needed by 0.05 (5% outreach-to-book ratio)
 - This final number is the **single daily action** that drives the entire revenue goal

- The logic: every upstream metric flows from the one daily behavior (sending DMs), making execution concrete and unambiguous

The entire \$20K/month goal collapses into one repeatable daily number: how many DMs to send — everything else is arithmetic.
